### **Response to Amendment**

1. This action is responsive to amendment filed on June 8, 2007 after board of appeal decision. Claims 1 – 20 are pending examination. This supplemental office action issued to correct a typographical error since claim 1 was rejected by the Board of Appeals and Interferences.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Meyerzon et al. U. S. Patent No.6,631,369 (referred to hereafter as Meyerzon).

As to claim 1, Meyerzon teaches a system for Uniform Resource Locator (URL) filtering, comprising:

receiving a request to process a URL in a desired manner.

receiving an event notification upon the occurrence of an event associated with the received URL (see col. 9 lines 45 – 67, Meyerzon discloses filtering of a web pages URL's in response to event notification) ;

searching , in response to said event notification, a lexical search tree data structure storing a plurality of URLs for said received URL (see col. 9 lines 45 – 67 Meyerzon discloses searching folders and documents in history table that are arranged in a hierarchical tree format );

processing said received URL in said desired manner in response to said received URL not matching any of the said plurality of URLs stored in said lexical search data structure (see col. 3 lines 21 – 47, Meyerzon discloses processing of an URL if is not matched by adding it to the history table; and denying said request to said received URL in said desired manner in response to said received URL matching any of said plurality of URLs stored in said lexical search tree data structure (see col.9 lines 45 – 67, Meyerzon discloses filtering of URLs if matched with stored URL, by deleting it from the history table)

As to claim 10, Meyerzon teaches a system for Uniform Resource Locator (URL) filtering, comprising:

a web server operable to receive a URL request from a client ; and a filter operable, upon receiving an event notification relating to said URL request from said web server, to search a lexical search tree data structure storing a plurality of

hostile URLs , said filter further operable to process said received URL in response to said received URL not matching any of said plurality of hostile URLs (see col.9 lines 45 – 67, Meyerzon discloses filtering of a web pages URL's in response to event notification) .
